

# Internet of Buckets, Teurcamp Edition!

check the labeled number on your nodemcu board (pictured below)

When powered, this nodemcu will have the SSID TEURCAMP01.

Once connected to the IoB's SSID, navigate to 10.0.0.1 - You should see the following page.

Clicking on 'rainbow' is the same as typing in "<http://10.0.0.1/?sequence=rainbow>"

You can also send static colors: "<http://10.0.0.1/?r=0&g=50&b=100>" (r, g and b values are a range between 0 and 255) curl GETs also work.

There's also a drink sequence on the buckets. The general idea is, whenever your bucket goes rainbow, you drink. It's on a random timer that triggers once every minute or so. Probably needs to be tweaked a bit to be more useful, but an interesting idea.
