

Internet of Buckets, Batteries!

We've provided hardware to charge 6 batteries at a time. (pictured below). It probably works on 220v (as labeled) but ymmv!

IMPORTANT! DO NOT LEAVE UNATTENDED!

When charging batteries, stay close by and check the temperature with your hand every 15 minutes. When the battery's temp is warmer than your skin it is fully charged. These batteries will heat up beyond safe levels if left charging unattended.
